PROFILE

Senior software engineer with 16 years of experience building and modernising enterprise software across retail, telecom, transport, finance and healthcare. Hands-on specialist in Java, Kotlin and Spring Boot, with a record of decomposing legacy systems into maintainable microservices and delivering cloud-native services. Combines technical ownership with pragmatic planning, mentoring and clear engineering practices; experienced in both large organisations and smaller teams.

CORE STRENGTHS

Java & Kotlin • Spring Boot • Microservices • Legacy modernisation • REST APIs • Kafka / event-driven systems • Kubernetes & GitOps • Cloud migration • CI/CD • Automated testing • Observability • Technical mentoring

EXPERIENCE

Deutsche Telekom IT Solutions Hungary | Senior Software Engineer *Jun 2026 – Sep 2026 | Budapest*

- Owned a Spring Boot upgrade pilot for an application family, completing about 95% of the migration work and bringing the first three application migrations close to completion; documented the process in a reusable runbook.
- Scoped and scheduled delivery with team input; established JUnit, Cucumber and Karate test baselines. Used OpenRewrite and Spring Boot Properties Migrator in a Gradle-based upgrade.
- Built reusable Prometheus/Grafana dashboards across non-production cloud environments and added a Spring extension to expose a missing metric; reviewed vulnerability analysis for the planned upgrade.

Independent period | Relocation & personal projects *Jul 2025 – May 2026 | Amsterdam / Budapest*

- Relocated to Budapest and developed self-directed software projects (selected work on page 2).

Decathlon Digital | Senior Software Engineer *Jul 2024 – Jun 2025 | Amsterdam*

- Consolidated four legacy recommendation sources, including a large Node.js monolith, into Java 21 / Spring Boot microservices for e-commerce recommendations; contributed to an OKR associated with +1.7% Average Order Value.
- Delivered cross-sell, basket completion, similar-item, top-selling, bundle and member-personalised recommendations, integrating Dynamic Yield and AI-driven sources while preserving API compatibility with existing and new front ends.
- Built and operated services with Kafka/Avro, Redis, Flyway, Docker, Kubernetes and Flux GitOps; shipped through GitHub Actions and monitored with Datadog and Prometheus.
- Established strong quality and delivery practices: approximately 100% unit-test coverage, feature-based non-regression tests, Bruno API suites and JMeter plans; documented services with OpenAPI/DocAPI and project READMEs.

MindFly | Software Engineer | Informal Java technical lead & trainer *Mar 2023 – Jun 2024 | Budapest*

- Led Java practice informally; designed Java and Spring Boot curricula and trained four junior colleagues from JVM/OOP fundamentals through generics, streams and concurrency, including virtual threads.
- Modernised a production .NET application towards Spring Boot microservices while preserving client interfaces; supported profiling and load testing before go-live. Assessed project and supplier code and presented findings to support technical decisions.

AppWise | Software Engineer *Jun 2021 – Oct 2022 | Hungary*

- Stabilised a core workflow in an EU-integrated traffic-management system for Magyar Közút, enabling data exchange with Austrian and Slovenian counterparts; worked with DATEX, ROSATTE and EU regulatory requirements.
- Contributed development, refactoring, code reviews and integration tests to a greenfield tolling microservice system in Jakarta. Stack: JEE, JBoss, Weld, MicroProfile.

EARLIER EXPERIENCE

adesso Hungary | Senior Software Engineer (Cloud), fixed-term *May 2020 – Dec 2020*

- Led system design and OpenShift environment documentation while integrating an email-classification solution (neural network and statistical model) for a major Hungarian insurer; supported Kubernetes deployment.

Negentropics | Senior Software Engineer *Mar 2019 – Dec 2019*

- Migrated an end-of-life solution to a Python/Scrapy news-crawling platform, built management reporting, integrated a fastText language classifier and guided a junior developer.

ApPello | Senior Software Engineer *Aug 2018 – Mar 2019*

- Banking collateral-management software; EJB, Spring Batch, JBoss, JUnit/PowerMock and performance work.

4DSoft | Senior Software Engineer *Aug 2017 – Jul 2018*

- Telekom customer-account portal; Java/EJB business logic, Oracle migrations, Wicket and GDPR fixes.

Pactera Switzerland AG / Innoveo Solutions | Software Engineer *Feb 2017 – Jul 2017*

- Insurance UI framework; Java/Spring, ANTLR, Realex payments and introduction of unit tests.

Hand-In-Scan | Senior Software Developer *May 2016 – Jan 2017*

- Spring Boot reporting and data-processing microservices; Gradle, MySQL, Google Cloud SQL and Bash device maintenance.

GE Healthcare | Software Engineer *Dec 2014 – Apr 2016*

- Patient-data sharing application and Spring Boot service security; Spring Security, REST and DICOM domain.

Swallk | Lead Developer (part-time start-up project) *Sep 2014 – Nov 2015*

- Owned a greenfield Java/Node.js/MongoDB product (10–20 hours/week) and coordinated two developers.

Interactive Brokers | Software Developer *Apr 2014 – Dec 2014*

- Maintained a large legacy Java/Oracle application and refactored code for testability.

LogMeIn | Back-end Developer *Jan 2014 – Mar 2014*

- BoldChat back-end and UI fixes; added API methods using JSP and servlets.

TOPdesk | Software Developer *Feb 2012 – Dec 2013*

- Rewrote a service-management UI module; built iText PDF reports and JUnit/Mockito tests (~80% coverage); used Jenkins.

Morgan Stanley | Technology Associate *Aug 2010 – Feb 2012*

- Operational Risk data-quality monitoring and end-to-end tests; completed the New York Technology Analyst Programme.

SELECTED PERSONAL PROJECTS & AI-ASSISTED DEVELOPMENT

- Khonsu Jyotish: Kotlin/Gradle multi-module application calculating planetary positions with Swiss Ephemeris; developed from personal specifications with AI assistance, then reviewed and tested by me.
- Password vault and rotation tool: Java/Spring Boot application with encryption and time-locked reveal; reviewed and extended beyond its initial AI-assisted prototype.
- Practical use of ChatGPT, Claude and Codex for codebase-level research and implementation support; verify generated changes against code and tests. Evaluated GitHub Copilot; not used in a delivered project.

TECHNOLOGY

Languages & frameworks: Java, Kotlin, Spring Boot / Framework (Core, Web, Data, Security, Batch), Java EE/JEE, MicroProfile, SQL, Python; C#/.NET and JavaScript/Node.js (working familiarity).

Cloud & delivery: Docker, Docker Compose, Kubernetes, Flux/GitOps, Helm, OpenShift, Azure; Gradle, Maven, Git, GitHub Actions, GitLab CI, Jenkins.

Data & integration: Kafka, Avro, Redis; PostgreSQL, Oracle, MySQL, MS SQL Server; Flyway, Liquibase; REST, OpenAPI/Swagger, DocAPI, Gravitee.

Quality & operations: JUnit 5, Mockito, Karate, Cucumber, Bruno, JMeter, JaCoCo, SonarQube; Prometheus, Grafana, Micrometer, Datadog; Vault, TLS/keystores, OpenRewrite; Bash, Linux, Scrapy, fastText, ML/NLP integration.

EDUCATION & LANGUAGES

MSc Electrical Engineering, Budapest University of Technology and Economics (BME VIK), 2004–2011

Hungarian (native) | English (professional working proficiency) | Dutch (B1) | German (A1)
